

January is Thyroid Awareness Month

What is the Thyroid?

The Thyroid is one of the largest endocrine glands in the body. It is located beneath the “Adams Apple” cartilage in the lower part of the neck. The gland regulates metabolism, protein production, and sensitivity to other hormones.

What is the Endocrine system?

The Endocrine system consists of a series of glands that produce hormones excreted into the blood stream. These glands control numerous bodily functions and processes.

What are common diseases of the Thyroid?

Diseases of the thyroid include: Hypothyroidism, Hyperthyroidism, Nodules, Cancer, Thyroiditis, and Goiter. There are other thyroid diseases but these are some of the most commonly found ailments associated with the thyroid.

Did you know?

There are more than 13 million undiagnosed Americans affected by some type of Thyroid disorder.

- NWHIC, 2009

ADAM.
